

» dyn__record

Provides a Dyn DNS record resource.

» Example Usage

```
# Add a record to the domain
resource "dyn_record" "foobar" {
  zone   = "${var.dyn_zone}"
  name   = "terraform"
  value  = "192.168.0.11"
  type   = "A"
  ttl    = 3600
}
```

» Argument Reference

The following arguments are supported:

- **name** - (Required) The name of the record.
- **type** - (Required) The type of the record.
- **value** - (Required) The value of the record.
- **zone** - (Required) The DNS zone to add the record to.
- **ttl** - (Optional) The TTL of the record. Default uses the zone default.

» Attributes Reference

The following attributes are exported:

- **id** - The record ID.
- **fqdn** - The FQDN of the record, built from the **name** and the **zone**.

» Import

Dyn records can be imported using a combination of the **type**, **zone**, **fqdn**, and optionally **id**.

```
$terraform import dyn_record.record {type}/{zone}/{fqdn}[/id]
```
