» dyn_record

Provides a Dyn DNS record resource.

» Example Usage

```
# Add a record to the domain
resource "dyn_record" "foobar" {
  zone = "${var.dyn_zone}"
  name = "terraform"
  value = "192.168.0.11"
  type = "A"
  ttl = 3600
}
```

» Argument Reference

The following arguments are supported:

- name (Required) The name of the record.
- type (Required) The type of the record.
- value (Required) The value of the record.
- zone (Required) The DNS zone to add the record to.
- ttl (Optional) The TTL of the record. Default uses the zone default.

» Attributes Reference

The following attributes are exported:

- id The record ID.
- fqdn The FQDN of the record, built from the name and the zone.

» Import

Dyn records can be imported using a combination of the type, zone, fdqn, and optionally id.

\$terraform import dyn_record.record {type}/{zone}/{fqdn}[/{id}]
